## 4945B/C Radio Communications Test Set

 $(300 \text{kHz} \sim 1.05 \text{GHz}/3 \text{GHz})$ 

#### **Product Overview**

4945B/C Radio Communications Test Set, which is a multifunctional and portable model based on software radio architecture, integrates plentiful functions, like frequency-hopping signal generation and analysis, vector signal generation and demodulation analysis, analog modulation signal generation and demodulation analysis, audio oscilloscope, automatic testing and so on. The test set is capable of major performance testes on transmitting and receiving of radio communication equipment, measurement and analysis on feature parameters of RF, modulation, audio, and digit etc. Wide applications of the test set cover R&D, production, verification, maintenance and repair, and tests on radio communication equipment, including short-wave / ultra short-wave radio stations, data link systems, communication and surveillance satellites, radio relay equipment. Military mobile carriers with radio communication terminals like communication vehicles, surveillance vehicles, vessels and ships, as well as external field tests can use this test set conveniently.

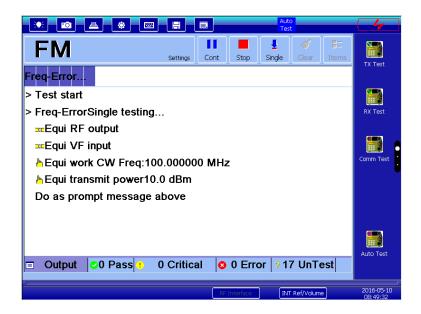

#### **Main Characteristics**

- Multiple RF testing functions: sweep spectrum analysis, broadband and narrow band power measurement, frequency error measurement, RF signal source;
- Analog standard communication test: AM, FM, SSB signal generation and demodulation analysis. Equipped with graphic display of demodulation audio, SINAD, SNR, distortion degree, modulation rate and other measurement functions and a built-in speaker which outputs demodulation voice in real-time. Modulation signal generator and modulation

- source support external audio and microphone;
- Digital standard communication test (option): 10MHz bandwidth digital vector signal generation and analysis, bit error rate measurement, with real-time output interface of digital demodulation;
- Frequency-hopping test (option): 60MHz transient bandwidth frequency-hopping signal generation and analysis. Frequency-hopping analysis supports measurements types like waterfall chart and frequency-time. Single capture lasts 1.3s at the bandwidth of 60MHz and the time resolution is 10ns;
- Audio signal testing: audio signal generation and analysis, the max. audio input level reaches 30Vrms (high impedance), the max. audio output level reaches 7Vrms (high impedance); capable of measurements on frequency, level, SINAD, SNR and distortion degree; audio generation supports dual-tone output; individual adjustment is available for dual-tone frequency and amplitude, phase is adjustable relatively;
- Dual-channel oscilloscope (option): DC~4MHz;
- Auto test software: on-line editing of DUT (device under testing) parameters, auto pilot testing, yield of test reports and other functions. The PTT control interface regulates transmitting and receiving of DUT;
- Built-in attenuator with high power: the max. input power is as high as 150W;
- Portable structure: external size (without handles): 426 (W)×222 (H)×180 (D)mm, easy for carry-on and application;
- Diversified power supply modes: the standard configuration supports AC220V or DC24V, built-in lithium-ion battery is available;
- Support network interface programming control;
- 10.4 inch large screen, resistor touch screen, English/Simplified Chinese interface, interface colors are free for your choice;
- Support simultaneous operations on multi-function windows, up to 4 windows can be operated at the same time.

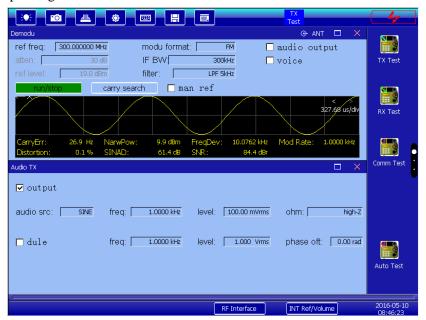

#### Auto testing functions of radio communication equipment

Can create and edit models, parameters and qualified specification limits of DUT. Choose your DUT and connect test cable, the comprehensive test set will automatically conduct the test. It controls transmitting and receiving of the DUT by PTT. When the DUT needs setup or the cable needs being changed, the test set will automatically halt the test and indicate further operation. The test goes on after the operation is finished. Qualified and unqualified items will be listed directly. Other functions, like storage, viewing, comparison and remote readout, are also available.

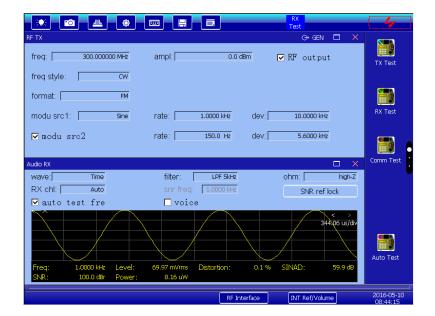

#### Transmitter test

It can conduct simultaneous tests on various performance specifications of transmitters, like signal power, frequency error, signal modulation characteristics, audio demodulation, and so on. Audio signals of transmitters can be provided and single/double tones are available for your choice. It can simulate pilot signals.

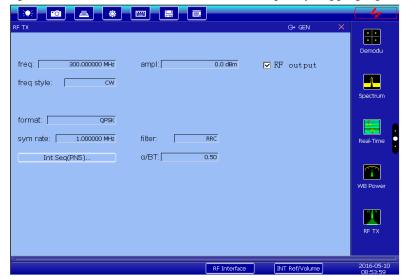

#### Receiver test

It's able to send out FM, AM and SSB RF signals; analyze audio demodulation of the receiver; measure accurately audio frequency, voltage, distortion degree, SINAD and SNR.

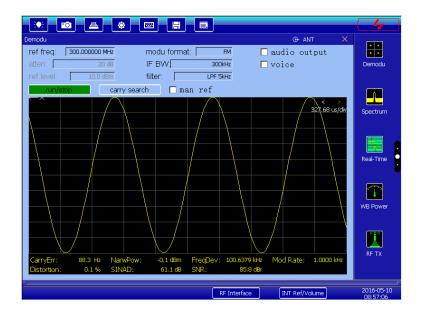

#### Function as a RF signal generator

Analog modulation of FM, AM, SSB etc., and digital modulation of BPSK, QPSK, 8PSK, GMSK, 16QAM and so on can all be output. The max. symbol rate of digital modulation is 5MHz. The test set upholds generation of 60MHz transient bandwidth frequency-hopping signals.

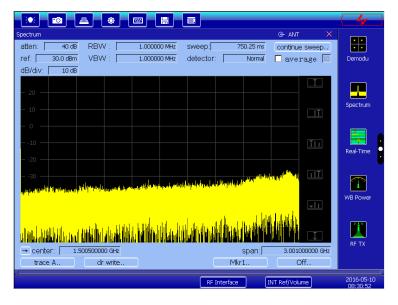

#### RF receiving and demodulation

The test set is capable of demodulation and analysis of analog modulation like FM, AM, SSB etc., and that of digital modulation signals including BPSK, QPSK, 8PSK, GMSK and 16QAM. Demodulated parameters and waveforms can be output. The max. demodulated bandwidth of analog modulation signals reaches 300kHz and the max. symbol rate of digital modulation and signal demodulation is 5MHz. Narrow band power measurement is available.

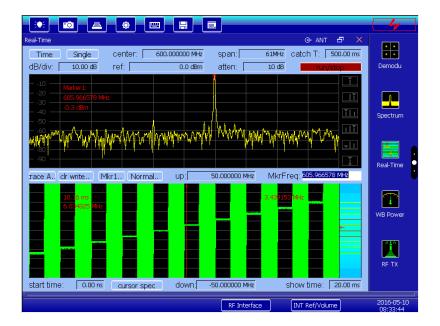

#### Sweep spectrum analysis

It enjoys wide frequency band, high resolution, high sensitivity, big dynamic range and other characteristics.

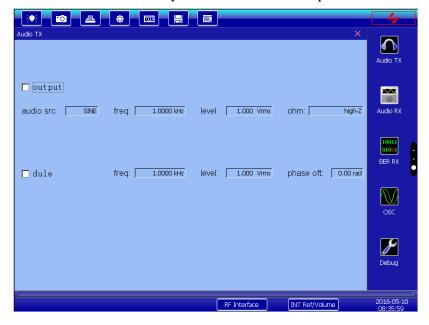

#### Frequency-hopping signal analysis

The max. transient analysis bandwidth of frequency-hopping signals is 60MHz. The display types are three-dimensional spectrum graph, time-frequency graph and time-amplitude graph. The test set can capture, store and analyze frequency-hopping signals. You can view spectrum and modulation domain graphs at any time. When modulation domain measurement is in progress, it is capable of accumulation and display of frequency points within any time frames. Frequency-hopping points can be observed directly. Pulse signals and transient signals can also be measured.

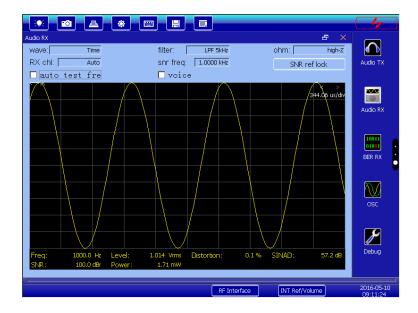

### Audio signal generation

Single and double tones are available for your choice. The max. output level reaches 7Vrms.

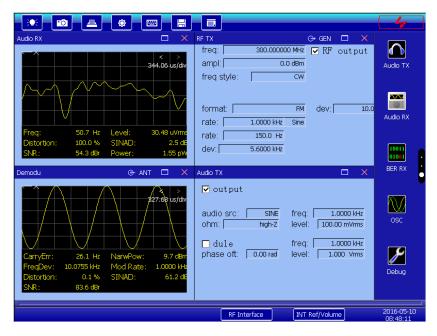

## Audio signal analysis

Audio filter is optional. The max. input level is up to 30Vrms. The test set supports measurements on frequency, level, distortion degree, SINAD and SNR, as well as audio waveform display.

#### Simultaneous operation on multiple windows

Support simultaneous operation of 4 windows at most, each window can be enlarged individually.

## **Typical Applications**

4945B/C Radio Communications Test Set is extensively employed due to the powerful functions and performances, which is used for R&D, repair, maintenance and test of communication equipment.

# **Technical Specifications**

Description	Specifications		
	Frequency Range	1MHz~1.05GHz (4945B, up to 100kHz),	
	requency runge	1MHz~3GHz (4945C, up to 100kHz)	
	Frequency	1Hz	
	Resolution		
	Output Level Range	GEN: -120dBm~+5dBm (max. modulation 0dBm)	
	Output Level Range	T/R interface : -130dBm~-35dBm	
	Level Resolution	0.1dB	
	Level Accuracy	±1.5dB (≥-110dBm), ±2.0dB(<-110dBm)	
RF Single Generation	SSB Phase Noise	-93dBc/Hz@20kHz (≤1.05GHz), -90dBc/Hz@20kHz(>1.05GHz)	
	Harmonic	Better than -25dBc (>1MHz, ≤0dBm)	
	Non-Harmonic	Better than -35dBc (>1MHz, +5dBm output)	
	Internal Analog	Sine, Square Wave, Triangle, Saw-Tooth, Dual-Tone (analog pilot)	
	Modulation Source	Sine, Square wave, mangle, Saw-100th, Duai-10he (analog phot)	
		Max. Frequency Offset: 150kHz	
	Internal FM	Accuracy: ±5%(frequency offset 5kHz~150kHz)	
		Modulation Rate: 20Hz~20kHz	
		Modulation Range: 0~100%	
	Internal AM	Accuracy: ±5%(relative value, depth 10%~90%)	
		Modulation Rate: 20Hz~20kHz	
	Internal SSB	Modulation Options: USB, LSB	
	internal SSB	Modulation Rate: 300Hz∼5kHz	
	External	Modulation Potas 2011ac (ISHII (FM AM) 20011 2111- (SSD)	
	FM/AM/SSB	Modulation Rate: 20Hz~15kHz (FM, AM), 300Hz~3kHz (SSI	

Modulation Type: 2ASK, 2FSK, GMSK, BPSK, QPSK, 8PSK, 16QAM  Max. Modulation Bandwidth: 10MHz  Max. Symbol Rate: 5MHz  Digit Source: PRBS, whole 0, whole 1, 0 and 1 alternation, externating digital filter: RC, RRC, GAUSS  EVM: ≤2%rms (symbol rate≤1MHz), ≤3%rms (symbol rate>  1MHz)  Max. Frequency-Hopping Transient Bandwidth: 60MHz  Max. Non-Repetitive Hopping Graphic Length: 4000  Frequency Agility Time: <10µs  Max. Hopping Rate: 100,000 times/sec  Hopping Type: internal step repetition, external frequency control  Frequency Range  Measurement Range  Measurement Range  Measurement Range  Measurement  Accuracy  Measurement  15% (≤120W, CW or frequency modulation)  300kHz~1.05GHz (4945B, low frequency depends on small IF bandwidth)  300kHz~3GHz (4945C, low frequency depends on small IF

Description	Specifications		
	Waveform	Sine, Square Wave, Triangle, Saw-Tooth	
	Signal Type	Single-Tone, Dual-Tone	
Audio Signal	Frequency	20Hz~20kHz (Sine), 20Hz~4kHz (Square Wave, Triangle, Saw-Tooth)	
Generation	Frequency Resolution	0.1Hz	
	Level Range	1mV~7Vrms (10k Ω load)	
	Level Accuracy	±5% (10k Ω load≥10mVrms)	
	Input Impedance	$150\Omega$ , $600\Omega$ , high impedance	
	Max. Input Level	30Vrms (high impedance)	
Audio Signal Analysis	A II File	Low-Pass: 300Hz, 5kHz, 15kHz, 20kHz	
	Audio Filter	Band-Pass: $0.3 \sim 3.4$ kHz, $0.3 \sim 5$ kHz, $0.3 \sim 15$ kHz, $0.3 \sim 20$ kHz	
		Frequency Range: 20Hz~20kHz	
		Input Level: 20mV~30Vrms	
	Frequency Meter	Resolution: 0.1Hz	
		Precision: 1Hz	
		Frequency Range: 20Hz~20kHz	
	Level Meter	Input Level: 1mV~30Vrms	
	Devel Meter	Unit: V, dBV, dBm	
		Precision: ±5% (High impedance, ≥10mVrms)	
	SINAD Meter	Measurement Range: 3∼60dB	
		Precision: ±1.0dB (SINAD>3dB, ≤40dB, 5kHz low-pass)	
		Frequency Range: 300Hz~5kHz	
		Input Level: 0.1~30Vrms	
	Distortion Meter	Measurement Range: 0~90%	
		Precision: $\leq \pm 0.5\%$ (distortion degree $\leq 10\%$ ), $\leq \pm 1.0\%$	
		Frequency Range: 300Hz~5kHz	
		Input Level: 0.1~30Vrms	
		Measurement Range: 3~60dB	
		Precision: ±1.0dB (SNR>20dB, ≤40dB)	
	SNR Meter	Frequency Range: 300Hz~5kHz	
		Input Level: 0.1~30Vrms	
	Frequency Range	100kHz~1.05GHz (4945B), 100kHz~3GHz (4945C)	
<b>a a</b>	Sweep Width	0Hz∼whole frequency bands	
Sweep Spectrum	Level Precision	±1.5dB	
Analyzer	Min. Displayed	Better than-125dBm (ANT interface), -75dBm (T/R interface)	
	Average Noise Level		

Description	Specifications	
	Resolution Bandwidth	30Hz∼3MHz (1-3 steps)
	Frequency Range	300kHz~1.05GHz (4945B, low frequency depends on small IF bandwidth) 300kHz~3GHz (4945C, low frequency depends on small IF bandwidth)
	Signal Format	FM, AM, SSB
	Demodulation Bandwidth	6.25, 8.33, 10, 12.5, 25, 30, 100, 300kHz
	Demodulation Audio	Low-Pass: 300Hz, 5kHz, 15kHz, 20kHz,
	Filter	Band-Pass: 0.3~3.4kHz, 0.3~5kHz, 0.3~15kHz, 0.3~20kHz
Demodulation and Analysis of Analog Modulation Signals	Frequency Range of Demodulation Counter	20Hz∼20kHz
	Demodulation Counter Resolution	0.1Hz
	FM	Frequency Offset Range: $0\sim150 \text{kHz}$ Precision: $\pm5\%$ (frequency offset range $5\sim150 \text{kHz}$ , modulation rate $1 \text{kHz}$ ) Modulation Rate: $20 \text{Hz} \sim 20 \text{kHz}$
	АМ	AM Depth Range: $0\sim100\%$ Precision: $\pm5\%$ (relative value, modulation range $30\%\sim90\%$ , modulation rate $1\text{kHz}$ ) Modulation Rate: $20\text{Hz}\sim20\text{kHz}$
	Sensitivity	≤-100dBm (10dB SINAD, ANT interface)
Demodulation and Analysis of Vector Signals (option)	Frequency Range	300kHz~1.05GHz (4945B, low frequency depends on small IF bandwidth), 300kHz~3GHz (4945C, low frequency depends on small IF bandwidth)
	Signal Format	GMSK, BPSK, QPSK, 8PSK, 16QAM
	Demodulation Bandwidth	10kHz∼10MHz
	Max. Symbol Rate	5MHz
	Filter	RC, RRC, GAUSS
Frequency-Hopping	Transient Bandwidth	60MHz, 30MHz, 15MHz, 7.5MHz, 3.75MHz, 1.875MHz

Description	Specifications			
Signal Analysis(option)	Capture Storage 8Gb Depth			
	Analysis Domain	Time-frequency (modulation domain), Time-Amplitude, Time-Spectrum (waterfall chart), Spectrum at random time		
	Min. Time 10ns Resolution			
	Frequency Range	DC~4MHz		
	Vertical Scale	10mV~10V/mark (1, 2, 5 steps)		
Dual-Channel	Horizontal Scale	$1$ us $\sim$ 1s/mark (1, 2, 5 steps)		
Oscilloscope	Coupling Type	DC, AC		
	nput Impedance $1M\Omega$			
Digital Sequence	Digit Format PN3, PN5, PN9, PN11			
Generation and Bit	Baud Rate 300bps~1Mbps (BPSK, GMSK, 2FSK, 2ASK)			
Error Rate  Measurement  (option)	Bit Error Rate $0.1{\sim}0.000001$ Measurement Range			
Internal Time-Base	Frequency: 10MHz; Aging Rate: $1\times10^{-7}$ /year; Temperature Stability: $\pm0.05$ ppm (0 $\sim$ 50°C)			
Operating Temperature	0°C∼+50°C			
Storage temperature	-40°C∼+70°C			
Size	External size (without handles and auxiliaries): W×H×D=426×222×180mm			
Weight	Not more than 12kg			
	Internal AC: 220V±10%, Frequency 50Hz±5%; External DC: 24V±2V (16V is			
Power acceptable);				
	battery: ≥11000mAh (option)			
Consumption	<100W			
Cooling Type	Internal air cooling			
Interface	RF: GEN interface (TNC), T/R interface(type N), ANT interface(TNC) BNC: audio input, audio output, oscilloscope input etc			
	Others: network port (support remote control), 26-core test bus interface, USB-host interface etc			

# **Ordering Information**

Main Unit: 4945B Radio Comprehensive Test Set (300kHz∼1.05GHz) 4945C Radio Comprehensive Test Set (300kHz∼3GHz)

# **Standard Package**

No.	Description	Remarks
1	User Manual (including Programming Manual)	1 copy
2	Tri-prong 220VAC power cord	1 pc
3	N-BNC adapter	1 pc
4	N-SMA adapter	1 pc
5	TNC-SMA adapter	1 pc
